

Dianik Bross

2022 Fleet Environmental Data

Fleet Environmental Data

Dianik Bross wishes to present a subsequent report, regarding its fleet environmental performance for year 2022, built upon the foundation laid by our recently issued ESG report, in May 2023. This new report includes a complete set of data for both our vessels, AG. NEKTARIOS and DIMITRIOS T, showing our efforts and dedication to providing our stakeholders with accurate, complete, and comprehensive information.

The entirety of our fleet's environmental informa-

tion for the year 2022 is now available, upon collection of all the relevant data.

We understand that presenting a holistic and accurate representation of our fleet's environmental impact is important for our stakeholders, and thus we chose to delay this supplementary report until we could provide a more complete picture.

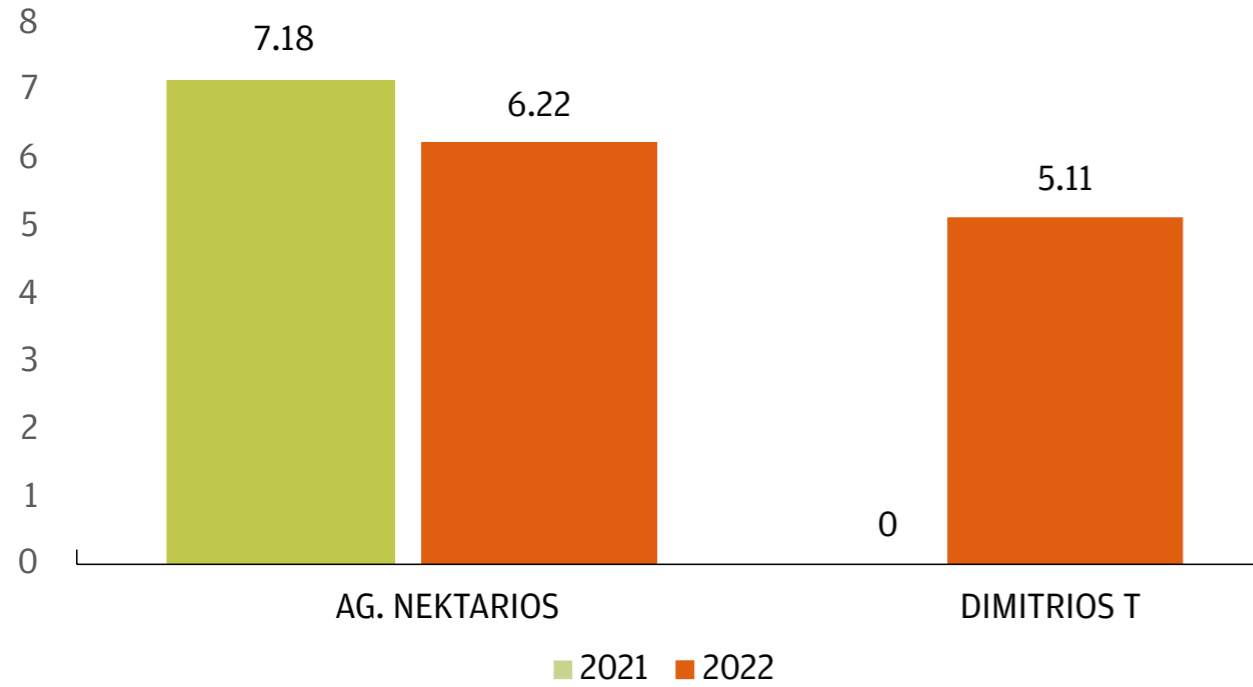

We are pleased to announce that all data has been collected and integrated into our analysis.

Vessels' Environmental Indexes

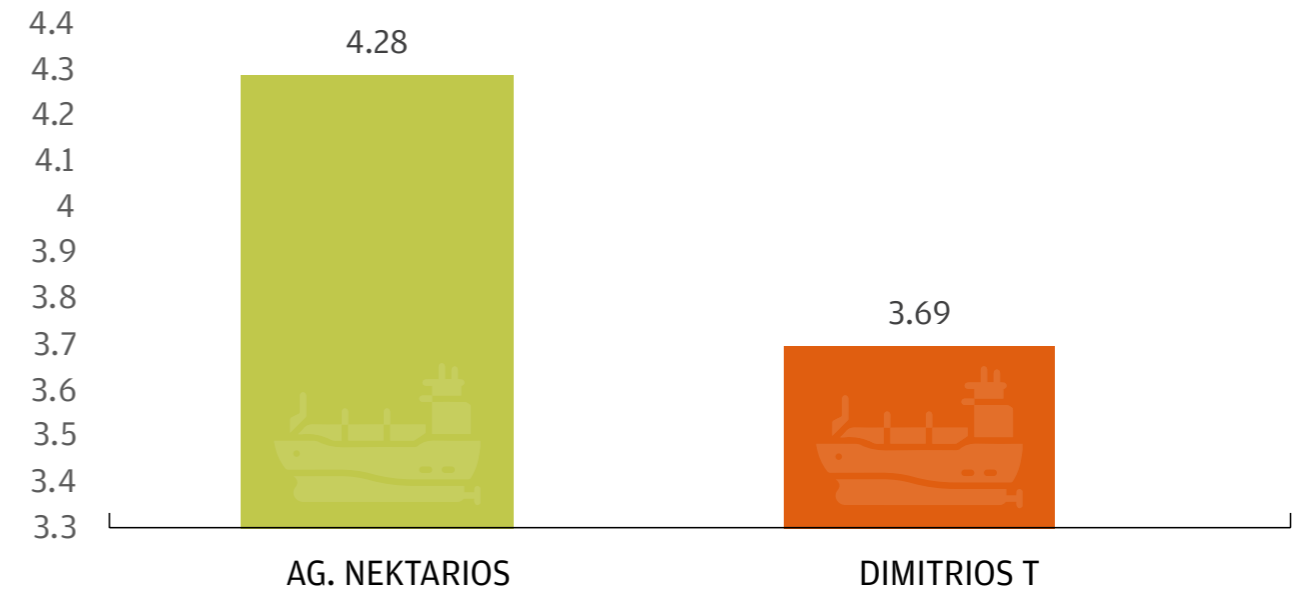

GRI: 3-3, 302-1, 302-2, 302-3, 303-5, 304-2, 305-1, 305-4, 306-2

* The entirety of all environmental information for the year 2022 will be available within April 2022, with a subsequent report, upon collection of all the relevant data. In the tables below, we are recording data for year 2021, for our stakeholders' reference point.
